

# CQG Connectivity to Eris Exchange

**Live Eris Swap Futures Market Data**  
**Leading Multi-Asset Class Analytics**  
**Direct Market Access to Eris SwapBook™**  
**Superior Spreading and Charting Tools**

## Advanced Charting and Analytics

CQG offers state-of-the-art charting and analytics, including exclusive tools designed for today's electronically-traded markets.

- Analyze market activity with numerous chart types and over one hundred technical studies, which are fully customizable.
- Monitor the markets using alerts based on conditions, studies, trend lines, price levels, and trading systems. Trades can be auto-executed using alerts.

## CQG API Solutions

Capitalize on CQG's strengths: Eris Swap Futures market data access and low-latency trade routing.

### CQG Data API

The CQG Data API makes it possible to seamlessly deliver CQG's market data and analytics to external applications.

- Access both real-time and historical data.
- The CQG Data API is based on Microsoft COM server technology.

### CQG Trading API

The CQG Trading API grants access to the CQG Hosted Exchange Gateways for order routing from external applications.

## Server-Side Spread Trading

For fixed income and futures cash spread trading, CQG Spreader allows Eris traders to route orders and work intermarket orders against legs on BrokerTec, NASDAQ eSpeed, as well as other US Treasury providers.

- Benefit from sophisticated order management and ultra-low-latency trade execution.
- Take advantage of our server-side speed via CQG servers co-located with exchange-matching engines.

## CQG Par Rates for Eris Contracts

Par rate equivalent represents the fixed rate at which an end-user would trade an analogous contract at \$0 NPV.

- End-users require par rates for NPV quoted products to spread Eris instruments against other yield-based products.
- Two methods to access par rates:
  1. User-input PV01 values
  2. CQG-generated values
